

## Omega standard sizes overview

The height and span of an Omega are linked due to the round roof.

Height	Span Width	
3,80	7,60	8,60
5,50	12,00	15,00
6,60	18,00	20,00

**Lengths:** our system is modular, you can add modules to a minimum length. The size of a module is the distance between the columns. This can vary depending wind region, span and height. It will always be possible to add modules to an existing building, making the building grow with your needs.
